

SANKET DAULAT BHOR

Senior Frontend Engineer | Frontend Architect | Tech Lead

Navi Mumbai, India | +91-9561527671 | sanket.d.bhor@gmail.com | linkedin.com/in/sanket-bhor | github.com/sanketbhor1992

PROFESSIONAL SUMMARY

Senior Frontend Engineer and Frontend Architect with 9+ years of experience (8+ years specialising in Angular), delivering high-scale enterprise SPAs across fintech, compliance, SaaS, and luxury concierge domains. Currently leading frontend architecture initiatives at Ten Lifestyle Group — supporting a large-scale multi-tenant Angular platform with 500+ reusable components and a 3-tier SCSS theming system across 30-40 global enterprise clients. Led Angular modernisation from v15 to v21, reduced LCP from 9s to 2.5s, and mentored a cross-functional team of 6 engineers. Author of angular-vitest-gen — an open-source CLI that auto-generates Vitest unit tests for Angular projects using large language models.

TECHNICAL SKILLS

Frontend: Angular (v2-v21), TypeScript, JavaScript (ES6+), HTML5, CSS3/SCSS, Angular Material, React

Architecture: Standalone Component Architecture, Design Systems, Multi-tenant SPA, REST API Integration, WebSocket, Route & Guard-based Navigation

State Management: NgRx Store, RxJS, Angular Signals, Reactive State Management, inject() DI Pattern

Performance: Core Web Vitals (LCP/CLS/INP), Lighthouse, OnPush Change Detection, Lazy Loading, Route-level Code Splitting, Image Optimisation

Testing: Vitest, Jest, Playwright E2E, TDD, SonarQube, axe-core, WCAG 2.1 AA, Security Vulnerability Remediation

AI & Tooling: GitHub Copilot, Claude, AI-assisted Dev Workflows, Groq API, LLM CLI Tooling, npm Publishing, Accessibility Automation

DevOps: GitHub Actions, CI/CD, TeamCity, Git, Docker, AWS, Vercel

Backend / DB: NestJS, FastAPI, MySQL, MongoDB, SQL Server

Methodology: Agile/Scrum, Frontend Roadmap Planning, Tech Mentoring, Architecture Reviews, Sprint Planning

PROFESSIONAL EXPERIENCE

Ten Lifestyle Group | Mumbai, India *August 2021 – Present*

Senior Engineer

- Contributed to frontend architecture and modernisation initiatives for TenPlatform and TenMaid — a configurable white-label concierge system serving 30–40 global enterprise clients — across a 500+ component library, a 3-tier client SCSS theming architecture, and a large-scale routing and guard-based Angular SPA.
- Led Angular modernisation from v15 to v21 using a phased, zero-downtime approach — adopting standalone component architecture, modern control flow syntax (@if / @for / @defer), inject()-based dependency injection,

esbuild tooling, and progressive Angular Signals adoption while maintaining backward compatibility across all active enterprise client deployments.

- Progressively refactored state-heavy components toward Angular Signals — replacing Observable chains with computed() and toSignal() where appropriate — improving rendering efficiency and reducing unnecessary re-renders across the application.
- Achieved a 72% reduction in LCP (9s to 2.5s) through route-level lazy loading, code splitting, optimised image delivery, asset optimisation, and OnPush change detection — improving Lighthouse performance scores by 40+ points.
- Identified and resolved critical security vulnerabilities across the frontend codebase — conducting dependency audits, patching vulnerable packages, and integrating automated vulnerability scanning into CI pipelines to maintain a secure production baseline.
- Built and standardized a shared enterprise component library of 500+ components adopted across all product teams, and architected a 3-tier SCSS theming system (backend override, client config, default fallback) enabling per-client white-label customisation without codebase duplication.
- Established a multi-layered testing strategy — migrating from Jest to Vitest on updated modules and introducing a 24-job Playwright E2E matrix across client, environment, and device combinations — reducing regression defects in covered areas.
- Built accessibility automation tooling to generate WCAG 2.1 AA-compliant structures across platform pages, and authored Markdown-based GitHub Copilot instruction files to standardise AI-assisted code generation aligned with project conventions and Angular patterns.
- Integrated SonarQube quality gates and GitHub Actions CI/CD pipelines to enforce coverage thresholds, automate testing, and enable zero-downtime deployments.
- Mentored a cross-functional team of 6 engineers through architecture reviews, Angular workshops, and code standards documentation, while collaborating with product teams on roadmap planning, feature scoping, and technical tradeoffs.

63 Moons Technologies | Mumbai, India *August 2018 – August 2021*

Senior Software Engineer

- Designed and delivered Voice Logger and Voice Cast — real-time compliance communication platforms for financial institutions, handling call recording, regulatory workflows, and large-scale outbound messaging.
- Engineered a resilient Angular frontend integration layer with automated retry logic, structured error handling, and offline-tolerant state management for compliance-critical, high-availability workflows.
- Built an Angular component library featuring audio playback controls, real-time waveform visualisation, and analytics dashboards — accelerating feature delivery and standardising UI patterns across multiple products.
- Led frontend delivery across 3 greenfield Angular projects using NgRx state management, reusable UI architecture, and strict TypeScript typing.
- Implemented GitHub Actions CI pipelines enabling automated unit testing and faster feedback loops for distributed development teams.

WhiteCrow Research | Mumbai, India *January 2018 – August 2018*

Software Engineer

- Developed a candidate engagement platform featuring advanced search, AI-assisted profile matching, multi-filter candidate discovery, and analytics dashboards.
- Optimised API integration and implemented client-side caching strategies, reducing page load times across high-frequency recruiter search operations.

Emcube Software Solutions | Mumbai, India *August 2016 – August 2017*

Junior Software Engineer

- Contributed to AngularJS-to-Angular migration for enterprise clients including Vendor GST Admin, PM System, and SalesPro CRM across frontend, API, and database layers.
- Developed a reusable Angular component library including multiselect controls, query builders, and data visualisation charts — adopted across multiple client projects.

OPEN SOURCE & SIDE PROJECTS

angular-vitest-gen (v3.1)

- CLI tool that auto-generates Vitest unit tests for Angular components, services, and directives using large language models (Groq Llama-3.3-70b-versatile). Handles computed vs writable Signals, enforces import path rules, performs post-write structural validation with retry logic, and resolves Angular standalone-specific class and import naming issues.
- Stack: Node.js, TypeScript, Groq API. Published on npm.

Farelo — AI-powered Travel Budget Estimator | farelo.in

- React-based travel budget estimator with a hybrid AI/deterministic pricing engine and affiliate monetisation layer. Built with React, Vite, and a FastAPI backend.

EDUCATION

M.Tech in Computer Engineering *Graduated: May 2025*

Ramrao Adik Institute of Technology, Navi Mumbai

PG-DAC — Post Graduate Diploma in Advanced Computing *Completed: 2016*

CDAC, Mumbai

B.E. in Computer Engineering *Completed: 2015*

Samarth Group of Institutions, Pune

CERTIFICATIONS & AWARDS

- 2x Hackathon Winner (2018, 2019) — 1st place against 10 competing teams, delivering production-ready fintech prototypes under time constraints.
- Ranked 1st in Oracle Database Module — CDAC, 2016.
- Freelance Angular Developer — Delivered 5+ production-grade SPAs for SMB and SaaS clients, managing full project lifecycle from architecture through deployment.
